ABSTRACT OF THE DISCLOSURE:

TITLE: **METHOD FOR CALCULATING MEMORY REQUIREMENTS FOR THIN CLIENT SIZING TOOL**

A method and procedure is established for utilization in a Thin Client Sizing Tool which has established an optimized solution of one or more Server Farms to fit a customer's profile. Part of implementing this solution is the provision of establishing adequate memory for the Server Farm or group of Server Farms. A methodology is provided whereby each operating system is correlated to each User type which is correlated to each application and then increased by the number of particular User types and the number of applications involved in order to establish the total memory requirements for a Server Farm or Metafarm.
